Microbiol. 23:1147-1155(1997).

FUNCTION: THE S-LAYER IS A PARACRYSTALLINE MONO-LAYERED ASSEMBLY OF PROTEINS WHICH COAI THE SURFACE OF BACTERIA.

SUBCELLULAR LOCATION: Cell wall.

SIMILARITY: CONTAINS 3 S-LAYER HOMOLOGY (SLH) DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      STRAIN-Sterne / 9131;

THE TRABECULAR MESHWORK.

-1- FUNCTION: MAY PARTICIPATE IN THE OBSTRUCTION OF FLUID OUTFLOW IN

ROOTLET AND BASAL BODY OF THE CONNECTING CILIUM OF PHOTORECEPTOR

CELLS. AND IN THE ROUGH ENNOPLASMIC RESTCULUM. ALSO SECRETED.

-1- TISSUE SPECIFICITY: EXPRESSED IN CILIARY BODY, IRIS, RETINA,

TRABECULAR NETWORK AND SCLERA BUT NOT IN LENS OR CORNEA. ALSO

EXPRESSED STRONGLY IN SKELETAL MUSCLE AND WEAKLY IN HEART, BRAIN,

TESTIS, LIVER, KIDDEY, THYROID AND BEDIDIDWHIS. NO EXPRESSION

DETECTED IN EMBRYO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               POLYMORPHISM: VARIANT ALA-164 IS FOUND IN STRAIN BALB/CJ WHICH HAS A LOW INTRAOCULAR PRESSURE. VARIANT THR.164 IS FOUND IN STRAINS C3H/HEJ AND C57BL/GJ, TWO STRAINS WHICH HAVE A RELATIVELY HIGH INTRAOCULAR PRESSURE. SIMILARITY: BELONGS TO THE OLFACTOMEDIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MEDLINE=98217378; PubMed=9548973; Fingert J.H., Ying L., Swiderski R.E., Nystuen A.M., Arbour N.C., Alward W.L.M., Sheffield V.C., Stone E.M.; "Characterization and comparison of the human and mouse GLCIA glaucoma

                                                                                                                            NOTICE: This sequence represents the full insert of this CDNA. No attempt has been made to verify whether this corresponds to the full-length of the original mRNA from which it was derived. We have tried to obtain double-stranded, or double chemistry sequence across the entire clone, but potentially, there are areas in the sequence where this level of coverage was not achieved.

Nevertheless, we are confident of the accuracy of this sequence as all regions of low quality, as defined by PHRAP (P. Green, in preparation), were visually inspected and edited accordingly. The consensus quality values for this sequence have been submitted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TTGGAATAGTTCTTGCTTTATAAAAATAGTACTGCGATTAAAAAAAGGCACTTCTGCCA 349

NOTE: This sequence may represent more than one clone.
NOTE: This is a 'working draft' sequence. It currently consists of 64 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NOTE: Estimated insert size may differ from sequence length

(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html). NOTE: This is a 'working draft' sequence. It currently consists of 61 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                    NOTE: Estimated insert size may differ from sequence length
